(Diaphragms)

Usage:

ESV & EPV Solenoid & Pulse Valves

Type : Direct, Pilot, Piston Type

Valves

Size : 3/8".....2"

Material: NBR, VITON, EPDM, TPE,
NEOPRENE

**Diaphragm spare-kits are shipped
with their springs in which models
include spring for proper operation.*

Description:

One of the most important part of solenoid valves is the diaphragm, which is a sealing and closing element. Diaphragms should be changed periodically within a specific maintenance plan. Since the life of the product is completely dependent on the operating conditions and frequency, periodic maintenance avoids undesired process/machine failures. Considering the different purposes of DURAVIS solenoid valves; the diaphragms are manufactured as NBR, EPDM, VITON, TPE and Neoprene materials. You can use the following selection table to choose spare parts diaphragm, or you can refer to DURAVIS technical catalog.
